Vinicius M. Bobato

(817) 542-8538 | <u>vmbobato@tamu.edu</u> Website: <u>https://vmbobato.github.io</u> | Linked-In: <u>https://www.linkedin.com/in/vmbobato/</u>

EDUCATION

Texas A&M University Ph. D Computer Engineering Texas A&M University M.S. Engineering Technology Texas A&M University B.S. Electronic Systems Engineering Technology with Cybersecurity Minor College Station, Texas Exp Grad December 2028 | GPA: 3.5 College Station, Texas Grad December 2024 | GPA: 3.5 College Station, Texas Grad May 2023 | GPA: 3.6

TECHNICAL SKILLS

Programming: Frameworks: Networking & Security: Tools & Platforms: Languages: Python, C/C++, Bash, SQL (Beginner) NumPy, Pandas, Matplotlib, Scikit-learn, PyTorch, Keras, TensorFlow, Flask TCP/IP, OSPF, VLANs, DHCP, DNS, Firewall configuration, Packet Analysis Linux (Ubuntu, Kali), Windows, Git, Nmap, Metasploit, Jupyter, Anaconda, Scapy Portuguese (Native), English (Fluent), and Spanish (Advanced)

EXPERIENCE

Department of Electrical and Computer Engineering – PRISE Project

Graduate Researcher, Aug. 2023 - Present

- Developed a 98% accurate deep learning model in PyTorch to detect malicious TCP traffic in an OT network.
- Led the development of Python scripts that improved communication efficiency between Linux containers by 30%.
- Analyzed and visualized 100K+ network packets using Python, identifying trends in malicious activity.

Texas A&M Engineering Experiment Station – Cyber Physical Resilient Energy Systems Project

Undergraduate/Graduate Research Assistant, May 2022 - Dec. 2023

- Engineered secure communication between DNP3 and ICCP protocols in virtualized Linux environments, enhancing system efficiency by 20%.
- Developed various programs in C/C++ and Python to integrate different technologies for research, improving system reliability and decreasing processing time by 50%.
- Performed data-analysis using NumPy and Pandas to find anomalies in network traffic data for three different attack vectors.

Department of Engineering Technology & Industrial Distribution

Graduate Teacher Assistant for Local-and-Metropolitan-Area Networks, Jan 2024 – Present

- Led networking lab sessions for 150+ students, focusing on terminal commands and troubleshooting techniques, resulting in 95% of students achieving hands-on proficiency by the end of the term.
- Designed and implemented network topologies, assisting students with practical skills in networking protocol implementations.

OUTSTANDING PROJECTS

- ASIC (AI for Satellite Image Classification) (https://vmbobato.github.io/asic-blog/):
 - Fine-tuned a image segmentation model to classify urban, forest, agriculture, and water regions from satellite images.
 - Deployed the model on a WebApp via Flask REST API to enable user-driven image analysis.
 - The model achieved over 70%-pixel accuracy on real-world data.
- CAPTCHA Image Classification:
 - Fine-tuned the pre-trained VGG16 model using Keras to accurately classify CAPTCHA images into different categories.
 - o Achieved 93% accuracy with data augmentation and evaluation using precision, recall, and F1-score.
- ML-Based-Firewall:
 - o Built a real-time intrusion detection system using a Random Forest classifier for network anomaly detection.
 - Achieved a ROC AUC score of 0.9997 on balanced network traffic dataset.
 - Built a Flask RESTful API to deliver live predictions.
